

Paper Abstracts Contents

A monitoring system for supercomputers of SUSU <i>Alexander Safonov, Pavel Kostenetskiy, Kirill Borodulin and Fedor Melekhin</i>	788
A multilevel approach to algorithm and software design for exaflops supercomputers <i>Boris Glinskiy, Igor Kulikov, Aleksey Snytnikov, Igor Chernykh and Dmitry Weins</i>	788
A parallel multiple-precision arithmetic library for high performance systems <i>Konstantin Isupov and Knyazkov Vladimir</i>	788
A technology for the design of hybrid supercomputer simulation codes for relativistic particle electrodynamics <i>Alexey Snytnikov, Ekaterina Mesyats, Marina Boronina and Alexey Romanenko</i>	789
A technology of 3D elastic wave propagation simulation using hybrid supercomputers <i>Dmitry Karavaev, Boris Glinsky and V. Kovalevsky</i>	789
Accelerator numerical calculations based on modular-systolic microprocessor <i>Ilya Osinin</i>	789
Application of modern high-performance techniques for solving local and global seismic problems <i>Nikolay Khokhlov and Igor Petrov</i>	790
Arrowhead decomposition for a block-tridiagonal system of linear equations <i>Pavel Belov, Eduard Nugumanov and Sergey Yakovlev</i>	790
Automated parallelization of sequential C-programs on the example of two applications from the field of laser material processing <i>Maxim Baranov, Dmitry Ivanov, Nikita Kataev and Alexander Smirnov</i>	790
Case study of using Intel Xeon Phi for solving particle-in-cell plasma simulation problems <i>Iosif Meyerov, Sergey Bastrakov, Igor Surmin, Arkady Gonoskov, Evgeny Efimenko, Aleksei Bashinov, Artem Korzhimanov, Anton Larin, Alexander Muraviev, Anatoly Rozanov and Mikhail Savichev</i>	791
Charge qubit inversion in combined laser and cavity field <i>Alexander Tsukanov and Vadim Chekmachev</i>	791
CMF - framework for high-resolution Earth system modeling <i>Vladimir Kalmykov and Rashit Ibrayev</i>	791
Combined use of HPC resources and grid infrastructures with Everest cloud platform <i>Oleg Sukhoroslov</i>	792
Computer modeling of structure formation in aqueous solutions of lecithin and bile salts <i>Anastasia Markina, Viktor Ivanov, Pavel Komarov, Alexei Khokhlov and Shih-Huang Tung</i>	792
Computer simulation of excitation conductivity by qubit model <i>Yuri Ozhigov and Nikita Skovoroda</i>	792
Control and managing the HPC cluster in Siberian Supercomputer Center <i>Nikolay Kuchin, Boris Glinsky, Igor Chernykh, Sergey Lomakin and Igor Makarov</i>	793
Delay structure mining in computing cluster <i>Alexey Gorelov, Archil Maysuradze and Alexey Salnikov</i>	793

Design and development of distributed systems for iterative conjugation of sector hydrodynamic models <i>Stanislav Samboretskiy</i>	793
Development of high-performance GPU-based technique for morphological research of biological objects <i>Nikolay Gavrilov and Vadim Turlapov</i>	794
Development of parallel linear solver for reservoir simulation on hybrid computing systems with GPUs <i>Arthur Yuldashev, Ratmir Gubaidullin and Nikita Repin</i>	794
Development of SIGMA software for the supercomputer simulation of coupled aerodynamic and thermomechanical processes in composite structures of high-speed aircraft <i>Yury Dimitrienko, Mikhail Koryakov and Andrey Zakharov</i>	794
Development of technological solutions in creating and using specialized hardware-software complex based on grid infrastructure supercomputer resources <i>Oleg Tchij, Nikolay Paramonov, Marina Kuleshova and Nadzeya Paramonova</i>	795
Distributed adaptive VoIP load balancing in hybrid clouds <i>Andrei Tchernykh, Jorge M. Cortés-Mendoza, Alexander Drozdov, Pascal Bouvry, Ana-Maria Simionovici and Arutyun Avetisyan</i>	795
Domain decomposition method for supercomputer simulation of gravitating systems <i>Nikolay Snytnikov and Vitaly Vshivkov</i>	795
Dynamic tuning methods of DVMH-programs for clusters with accelerators <i>Vladimir Bakhtin, Alexander Kolganov, Victor Krukov, Natalya Podderugina and Mikhail Pritula</i>	796
Educational and research systems for studying of parallel methods <i>Evgeniy Kozinov, Victor Gergel, Alexey Linev and Anton Shtanyuk</i>	796
Efficiency of ARM processors for classical molecular dynamics calculations <i>Vsevolod Nikolskiy and Vladimir Stegailov</i>	796
Experience of teaching of supercomputer technologies on the engineering directions in FSSFEI HPE “SUSU” (NRU) <i>Natalia Dolganina</i>	797
Heterogeneous job consolidation for power aware scheduling with quality of service <i>Fermin Armenta-Cano, Andrei Tchernykh, Jorge-Mario Cortés-Mendoza, Ramin Yahyapour, Alexander Drozdov, Pascal Bouvry, Dzmitry Kliazovich and Arutyun Avetisyan</i>	797
High-performance computing in bioinformatic analysis of protein superfamilies to design enzymes with new properties <i>Dmitry Suplatov, Nina Popova, Kirill Kopylov, Maksim Shegay, Vladimir Voevodin and Vytaš Švedas</i>	797
High-performance simulations of continuously variable transmission dynamics <i>Stepan Orlov, Natalia Melnikova, Yury Ispolov and Nikolay Shabrov</i>	798
How to reach GreenGraph500 top with FPGA-based supercomputer? Theory and practice. <i>Anatoliy Sizov and Sergey Elizarov</i>	799

Hydrogeological modeling in radioactive waste disposal safety assessment using the GeRa code <i>Ivan Kapryin, Igor Konshin, Kopytov German, Kirill Nikitin and Yuri Vassilevski</i>	799
Implementation of e-learning management system at the faculty of Computational mathematics and informatics of South Ural State University for supercomputer technologies learning <i>Peter Mekaev and Pavel Kostenetskiy</i>	799
Influence of spontaneously formed crystalline inclusions on the mechanical properties of amorphous polymer matrix <i>Dmitry Gusarov, Viktor Ivanov, Pavel Komarov, Alexei Khokhlov, Yuung-Ching Sheen, Yang-Shan Lin and Cheng-Hung San</i>	800
Information and mathematical software for the aerospace systems of remote sensing and the radiation forcing on the Earth's climate to predict the consequences of development of the Arctic region and computing <i>Tamara Sushkevich, Sergey Strelkov and Svetlana Maksakova</i>	800
Integration of Russian Tier 1 center with HPC at NRC “Kurchatov Institute” <i>Ivan Tertychnyy, Ruslan Mashinistov, Alexander Novikov, Alexey Poyda, Alexei Klimentov and Eygene Ryabinkin</i>	801
Integrative possibilities of the course “Parallel Programming” <i>Irina Zakharova and Alexander Zakharov</i>	801
Investigation of graphics processors efficiency on the example of quantum-chemical modeling of the complex of chitosan <i>Arthur Yuldashev, Vladimir Lazarev and Vladimir Spele</i>	801
Iterative modeling using supercomputer for reengineering semiconductor devices and analyzing their radiation resistance <i>Alexander Potehin, Serge Obolenskiy, Alexey Liniov and Alexander Puzanov</i>	802
Massively parallel hybrid algorithm for simulation of seismic wave propagation in complex media <i>Victor Kostin, Vadim Lisitsa, Galina Reshetova, Vladimir Tcheverda and Dmitry Vishnevsky</i>	802
Mathematical and numerical modeling of multidimensional quasi-stationary electromagnetic fields in the channel of electrodynamical launchers <i>Mikhail Galanin</i>	802
Matrix methods for fluid mechanics problems <i>Michael Ermakov</i>	803
Method for reducing graph of communication delays in for visual analysis <i>Alexey Salnikov and Nikolay Zhukov</i>	803
Method of predicting the binding constants of steroids based on artificial neural networks <i>Irina Fedyushkina, Ilacai Romero Reyes, Vladlen Skvortsov and Inna Levina</i>	803
Methods for increasing optimisation for large scale parallel computing experiments on unstructured grids <i>Sergey Sukov</i>	804

Microservices cloud applications testing approach <i>Dmitry Savchenko and Gleb Radchenko</i>	804
Modeling distributed column indexes in the context of parallel database systems <i>Stepan Prikazchikov and Pavel Kostenetskiy</i>	804
Modeling the dynamics of the formation of clusters of radiation defects with the use of high-performance computing <i>Alexsander Puzanov, Sergey Obolensky, Vladimir Kozlov, Ekaterina Volkova, Alexsander Potehin and Ilya Zabavichev</i>	804
Modern high-performance reconfigurable computer systems based on Xilinx Virtex-7 and Virtex UltraScale FPGAs <i>Ilya Levin, Alexey Dordopulo, I. Kalyaev, Yu. Doronchenko and M. Raskladkin</i>	805
MPI implementation of dimension reduction multilevel scheme for parallel solving the global optimization problems <i>Alexander Sysoyev, Konstantin Barkalov, Victor Gergel and Ilya Lebedev</i>	805
Multiscale modelling approach to property prediction: hypercrosslinked polystyrene. <i>Alexei Lazutin, Anna Glagoleva, Mikhail Glagolev and Valentina Vasilevskaya</i>	805
Numerical modeling of interacting galaxies on Intel Xeon Phi supercomputers <i>Igor Kulikov, Igor Chernykh, Vladislav Nenashev and Eugeniya Katysheva</i>	806
Numerical models of helical electron beams for cyclotron resonance-based masers <i>Aleksey Kuntsevich and Vladimir Manuilov</i>	806
Numerical solution of kinetic equations for high-speed rarefied gas flows <i>Vladimir Titarev</i>	806
Octoshell: large supercomputer complex administration system <i>Sergey Zhumatiy, Dmitry Nikitenko and Vladimir Voevodin</i>	807
On parallel programming paradigms <i>Lidia Gorodnyaya</i>	807
On the experience of development and teaching the lecture course “Parallel numerical methods” in University of Nizhny Novgorod <i>Konstantin Barkalov, Iosif Meyerov and Sergey Bastrakov</i>	807
Operator library for solving of mathematical physics problems on locally adaptive grids using CUDA <i>Michael Krasnov</i>	807
Optimal checkpointing to the local storage device <i>Aleksey Bondarenko and Mikhail Iakovovski</i>	808
Optimized diamond photonic molecule for quantum communications <i>Maxim Rogachev, Igor Kateev and Alexander Tsukanov</i>	808
Optimized implementation of HPCG benchmark on supercomputer with “Angara” interconnect <i>Alexander Agarkov, Alexander Semenov and Alexey Simonov</i>	808
Parallel algorithm for local-best-match time series subsequence similarity search on the Intel MIC architecture <i>Aleksander Movchan and Mikhail Zymbler</i>	809

Parallel algorithm for mathematical modeling of interaction of a strong shock wave with a molecular cloud <i>Boris Rybakin, Valery Goryachev, Lyuben Stamov and Elena Mikhailchenko</i>	809
Parallel algorithm for solving large-scale dynamic general equilibrium models <i>Nikolai Melnikov, Arseniy Gruzdev, Michael Dalton and Brian O'Neill</i>	810
Parallel algorithm for sparse QR decomposition of a rectangular upper quasi triangular matrix with ND-type sparsity <i>Sergey Kharchenko</i>	810
Parallel clustering algorithm for Intel Xeon Phi coprocessor <i>Timofey Rechkalov</i>	810
Parallel computing in identification of steel corrosion processes <i>Marat Enikeev and Irek Gubaydullin</i>	810
Parallel implementation of extended Petri nets in the low-level modeling of traffic <i>Nikolay Ershov</i>	811
Parallel implementation of the sparse QR decomposition for rectangular upper quasi triangular matrix with ND-type sparsity <i>Sergey Kharchenko and Alexey Yushchenko</i>	811
Parallel linear systems solution for multiphase flow problems in the INMOST framework <i>Igor Konshin, Igor Kaporin, Kirill Nikitin and Yuri Vassilevski</i>	811
Parallel partitioning tool GridSpiderPar for large mesh decomposition <i>Evdokia Golovchenko and Mikhail Yakobovskiy</i>	812
Parallel program complex for numerical weather prediction and climate modeling <i>Mikhail Tolstykh, Rostislav Fadeev and Vassily Mzyak</i>	812
Parallelization efficiency of model of joint implant with finite element software <i>Razim Garipov, Polina Maximova, Aliya Gainetdinova and Alfiya Yamileva</i>	813
Perspectives of exascale computing for novel energy technologies <i>Vyacheslav Vecher, Nikolay Kondratyuk, Genri Norman, Nikita Orekhov, Vasiliy Pisarev, Grigory Smirnov and Vladimir Stegailov</i>	813
Programming and Optimization for Intel Xeon Phi course <i>Alexey Linev, Iosif Meyerov, Alexander Sysoyev, Sergey Bastrakov, Anton Gorshkov and Alexey Svistunov</i>	813
Quantum-chemical simulation of adsorption and catalytic properties of gold nanoparticles in the cluster approach <i>Daria Pichugina, Sergey Nikolaev and Nikolay Kuzmenko</i>	814
Research and development methods ensure acceptable thermal mode for teraflops supercomputers <i>Alexsander Rymarchuk, Victor Maziuk, Nikolay Paramonov and Oleg Tchij</i>	814
Research of tomographic schemes of low-frequency ultrasonic diagnostics on supercomputers <i>Sergey Romanov</i>	814

Research on using trees to solve the knapsack problem by means of parallel computation <i>Mikhail Kupriyashin</i>	815
Serial-parallel method using for partial associative operation parallelizing <i>Alexey Frolov</i>	815
Simulation of unsteady processes in turbomachines based on non-linear harmonic NLH-method with the use of supercomputers <i>Yuri Boldyrev, Alexander Rubtsov, Yuri Kozhukhov, Alexander Lebedev, Ivan Cheglakov and Aleksei Danilishin</i>	815
Solution of problems of combustion gas dynamics on hybrid CPU/GPU computing system <i>Lyuben Stamov and Elena Mikhailchenko</i>	815
Solving the global optimization problems on heterogeneous cluster systems <i>Konstantin Barkalov, Victor Gergel, Ilya Lebedev and Alexander Sysoyev</i>	816
Solving unstable linear programming problems of high dimension on cluster computing systems <i>Irina Sokolinskaya and Leonid Sokolinsky</i>	816
Some approaches to organizing of remote access to supercomputer resources <i>Julia Dubenskaya, Alexander Kryukov and Andrey Demichev</i>	816
Supercomputer simulation of nanocomposites on the basis of carbon and silicon in new types of Li-ion power sources <i>Dmitry Varlamov, Vadim Volokhov, Tatiana Zyubina, Alexander Zyubin, Alexander Volokhov and Gennady Pokatovich</i>	817
Supercomputer simulations method of the coupled qubit and oscillator systems <i>Marina Denisenko, Arkady Satanin, Alexey Liniyov, Victor Gergel and Dmitry Pashin</i>	817
Supercomputing in the context of the knowledge economy <i>Yuri Zelenkov</i>	817
The dependence of reverse micelles free energy from their size: a molecular dynamics simulation at “Lomonosov” <i>Alexander Nevidimov, Sergey Tovstun and Vladimir Razumov</i>	818
The development of basic GPU kernels for the new block AMG algorithms for solving SLE with explicitly calculated sparse basis <i>Ilya Afanasyev and Yury Potapov</i>	818
The efficiency of the implementation of iterative methods for the solution of elliptic equations in atmospheric general circulation models on massively parallel systems <i>Evgeny Mortikov</i>	818
The interdisciplinary course “Introduction to parallel evolutionary models and algorithms” – teaching experience <i>Nikolay Ershov and Nina Popova</i>	819
The software platform of transmission of intense data streams on remote supercomputers <i>Grigoriy Masich and Vladislav Shchapov</i>	819

The structure of INMOST program platform and its usage for numerical modeling problems <i>Alexander Danilov, Kirill Terekhov, Igor Konshin and Yuri Vassilevski</i>	819
Topology reserves of flattened system networks <i>Viktor Podlazov and Michail Karavay</i>	820
Two-level parallel strategy for multifrontal sparse Cholesky factorization <i>Sergey Lebedev, Dmitry Akhmedzhanov, Evgeniy Kozinov, Iosif Meyerov, Anna Pirova and Alexander Sysoyev</i>	820
Uncertainty in clouds: challenges of efficient resource provisioning <i>Andrei Tchernykh, Uwe Schwiegelsohn, Vassil Alexandrov and El-Ghazali Talbi</i>	820
Universal block Lanczos-Pade method for linear systems over large finite fields <i>Nikolay Zamarashkin and Mihail Cherepnev</i>	820
Using Intel Xeon Phi coprocessor for execution of natural join on compressed data <i>Leonid Sokolinsky and Elena Ivanova</i>	821
Using multifrontal hierarchically solver and HPC systems for 3D Helmholtz problem <i>Sergey Solovyev, Dmitry Vishnevsky and Hongwei Liu</i>	821
Using of container virtualization to run tasks on a distributed supercomputer <i>Vladislav Shchapov and Denis Chugunov</i>	821
Using of Lammps and Gromacs software packages for high-performance deposition simulation of nano-structured thin films <i>A.N. Sharov, A.A. Gorokh, M.Y. Kozmin, A.V. Sulimov, D.V. Lukyanenko and S.A. Sharapova</i>	822
Virtual prototyping technology is the key technology for analysis of results of supercomputer modeling <i>Nikolay Shabrov, Vladislav Kiev and Aleksei Kuzin</i>	822
What is the fastest way to compute quantum and classical atomistic models using the latest software algorithms and supercomputing hardware? <i>Grigory Smirnov and Vladimir Stegailov</i>	822
Yet another tridiagonal matrix algorithm parallelizing method <i>Alexey Frolov</i>	823
